

# Reasons for Polyglot Programming

objessitron

one language  
cannot possibly  
be enough!

# To automate!

When a tool  
in another language  
is the most direct  
route to your  
goal.

Pretty  
Documentation

mkdocs

install  
Ruby

The best designs come from  
paying attention to what is there.

@mfeathers

# For the People

this is not  
what I wanted  
to explore

Feeling  
stupid

Divisions

I'll use whatever  
lets me get work done

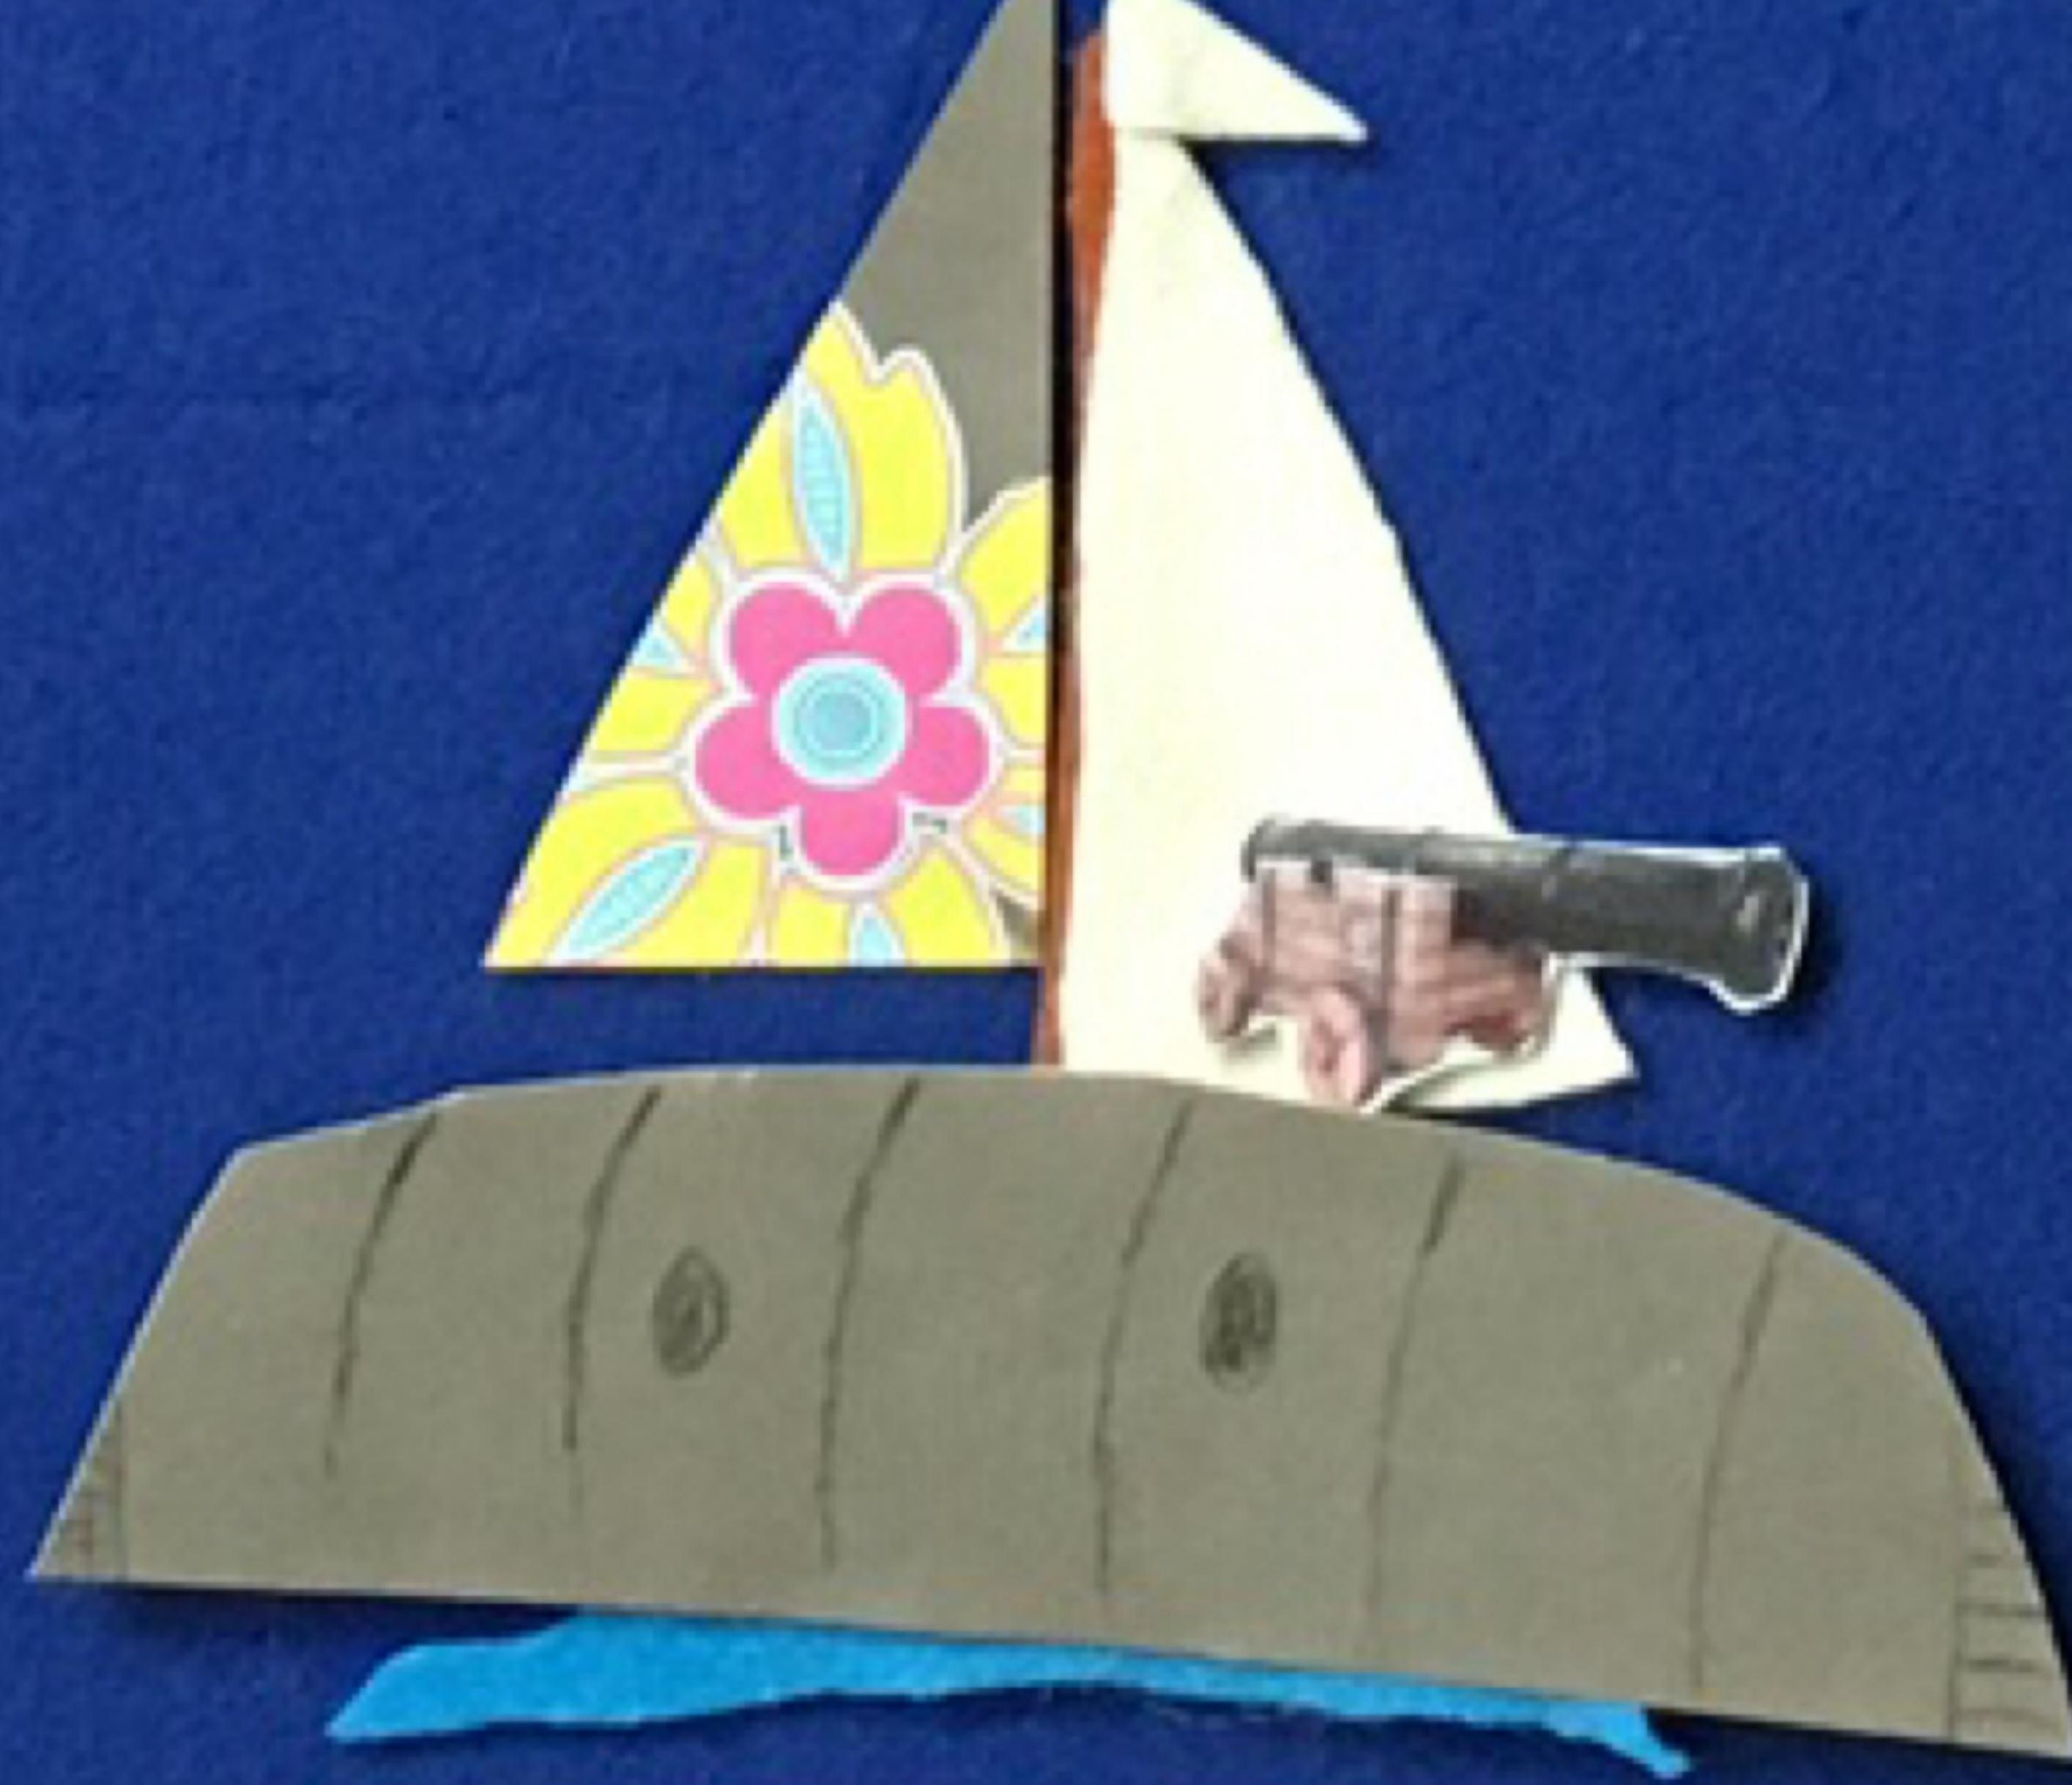

there are  
other worlds  
than these

who will stay?  
who will change?  
who will join?

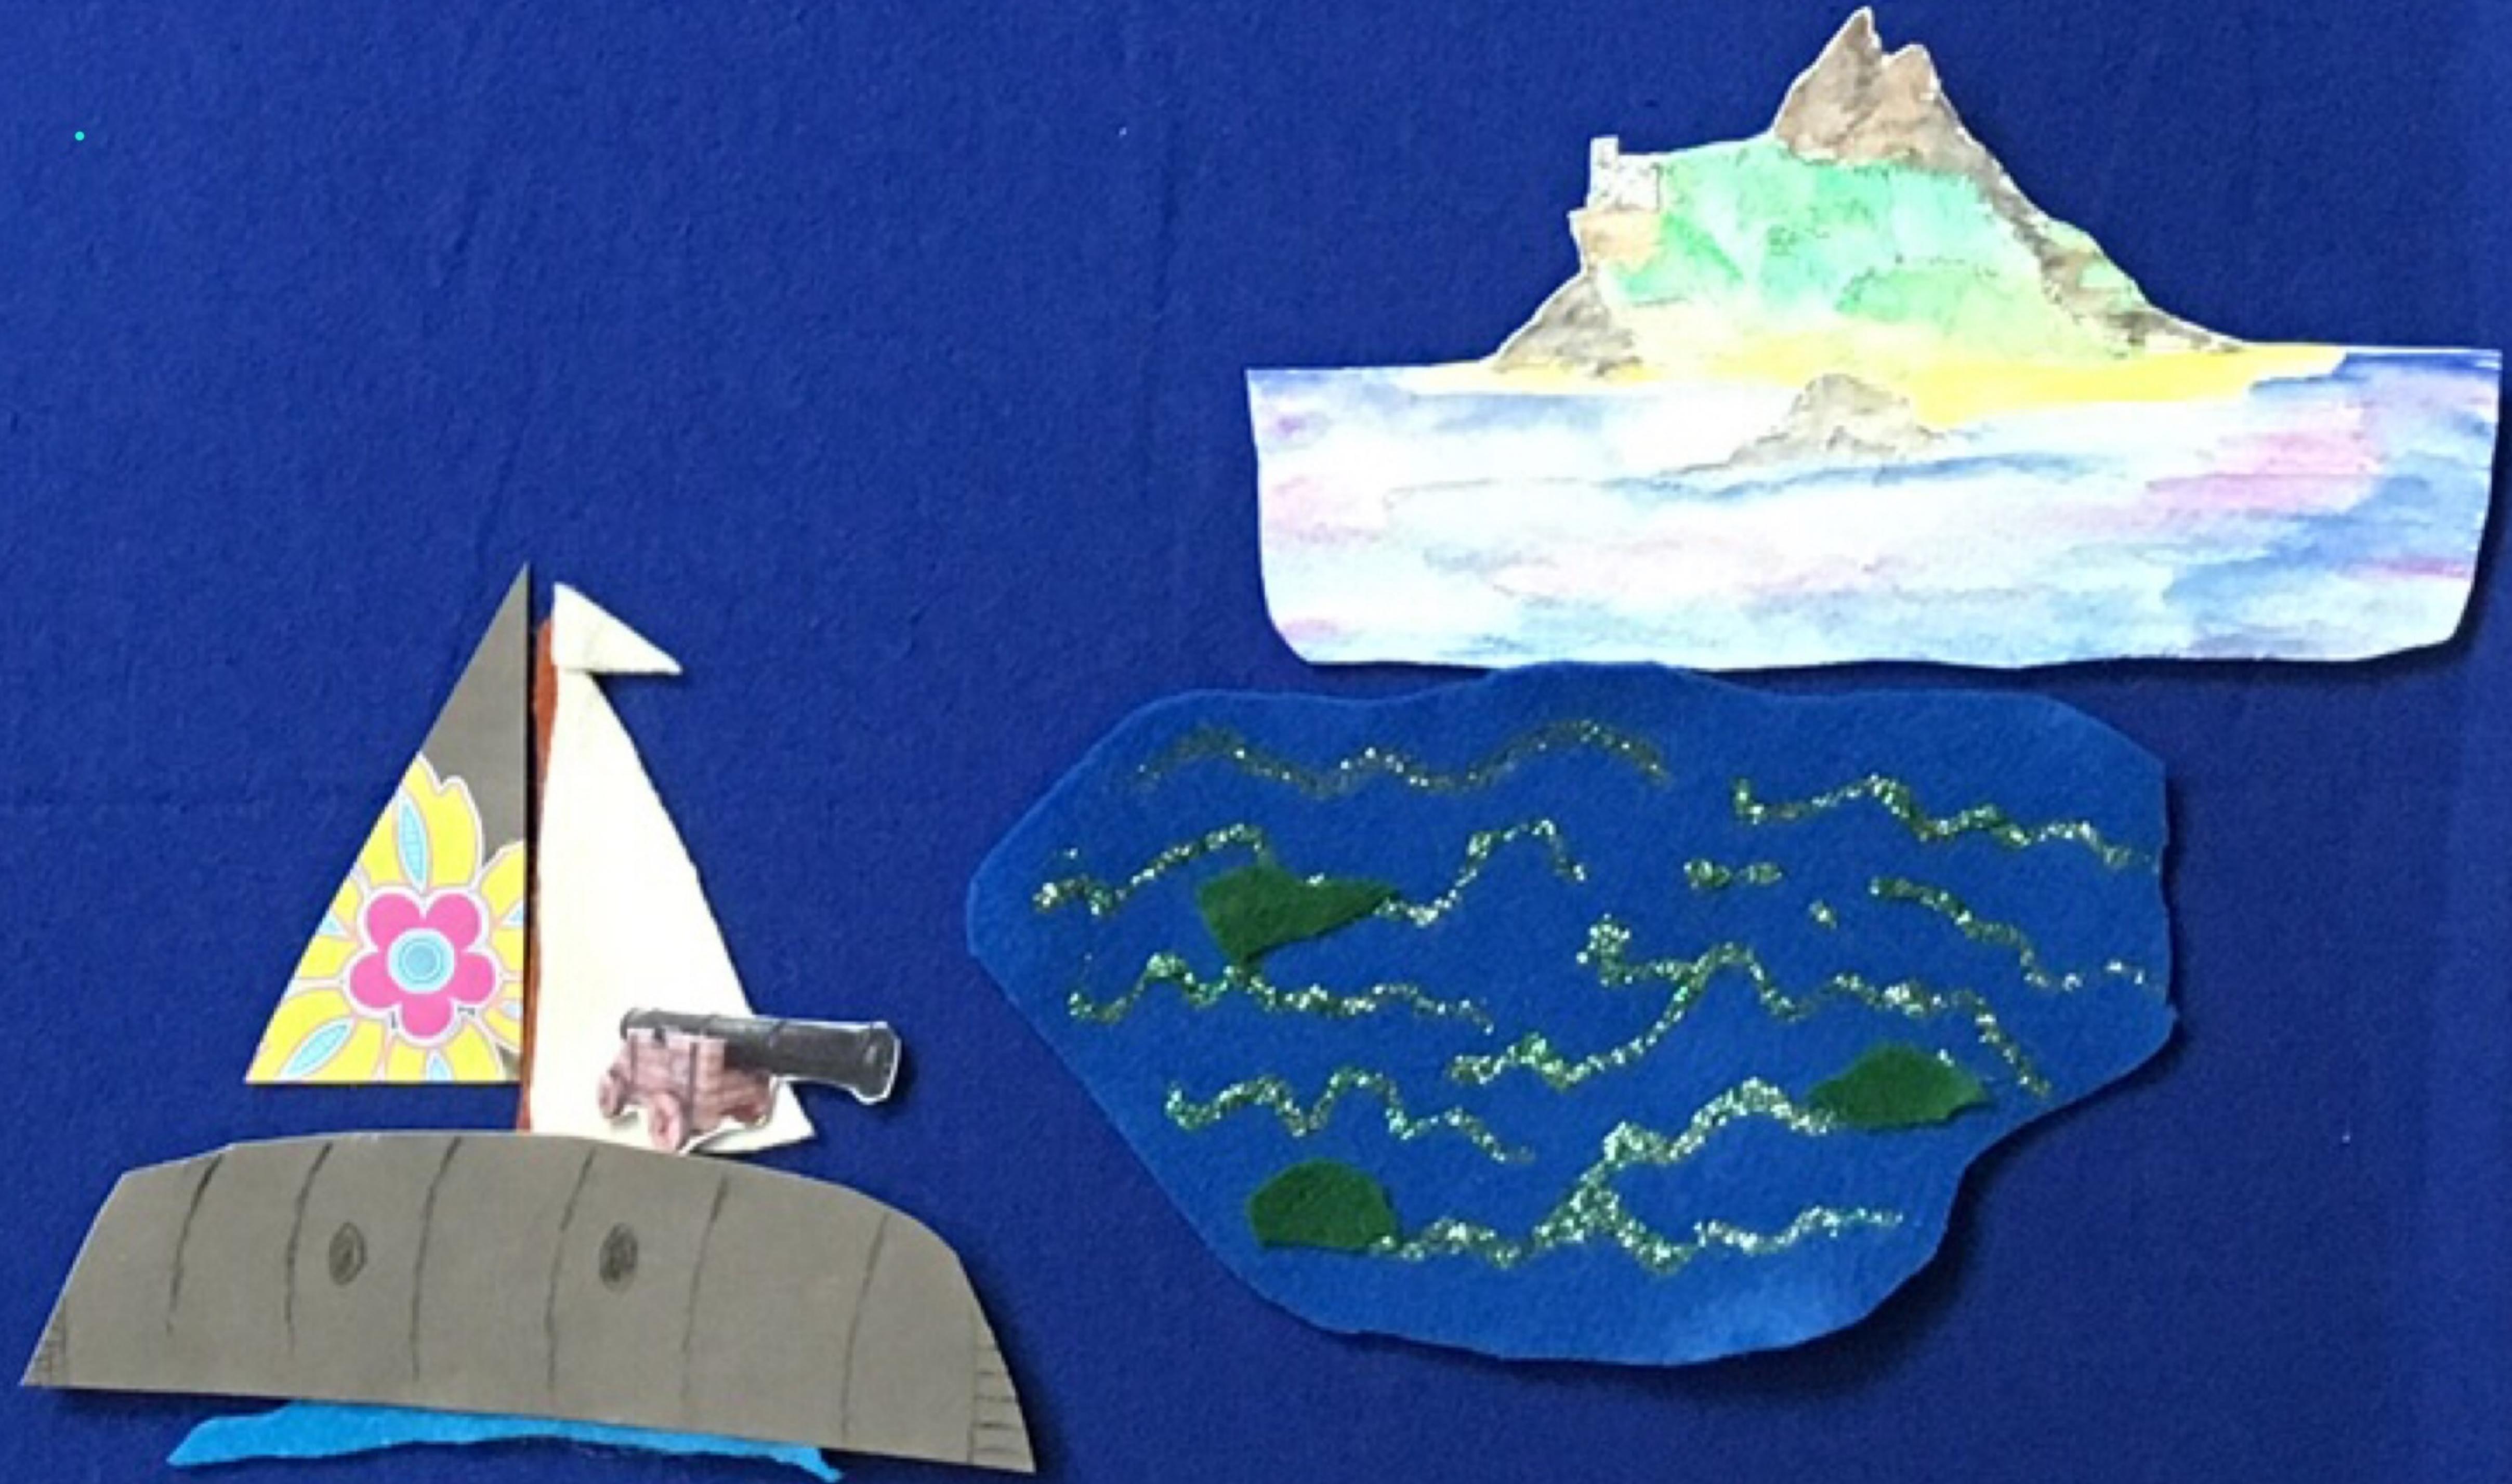

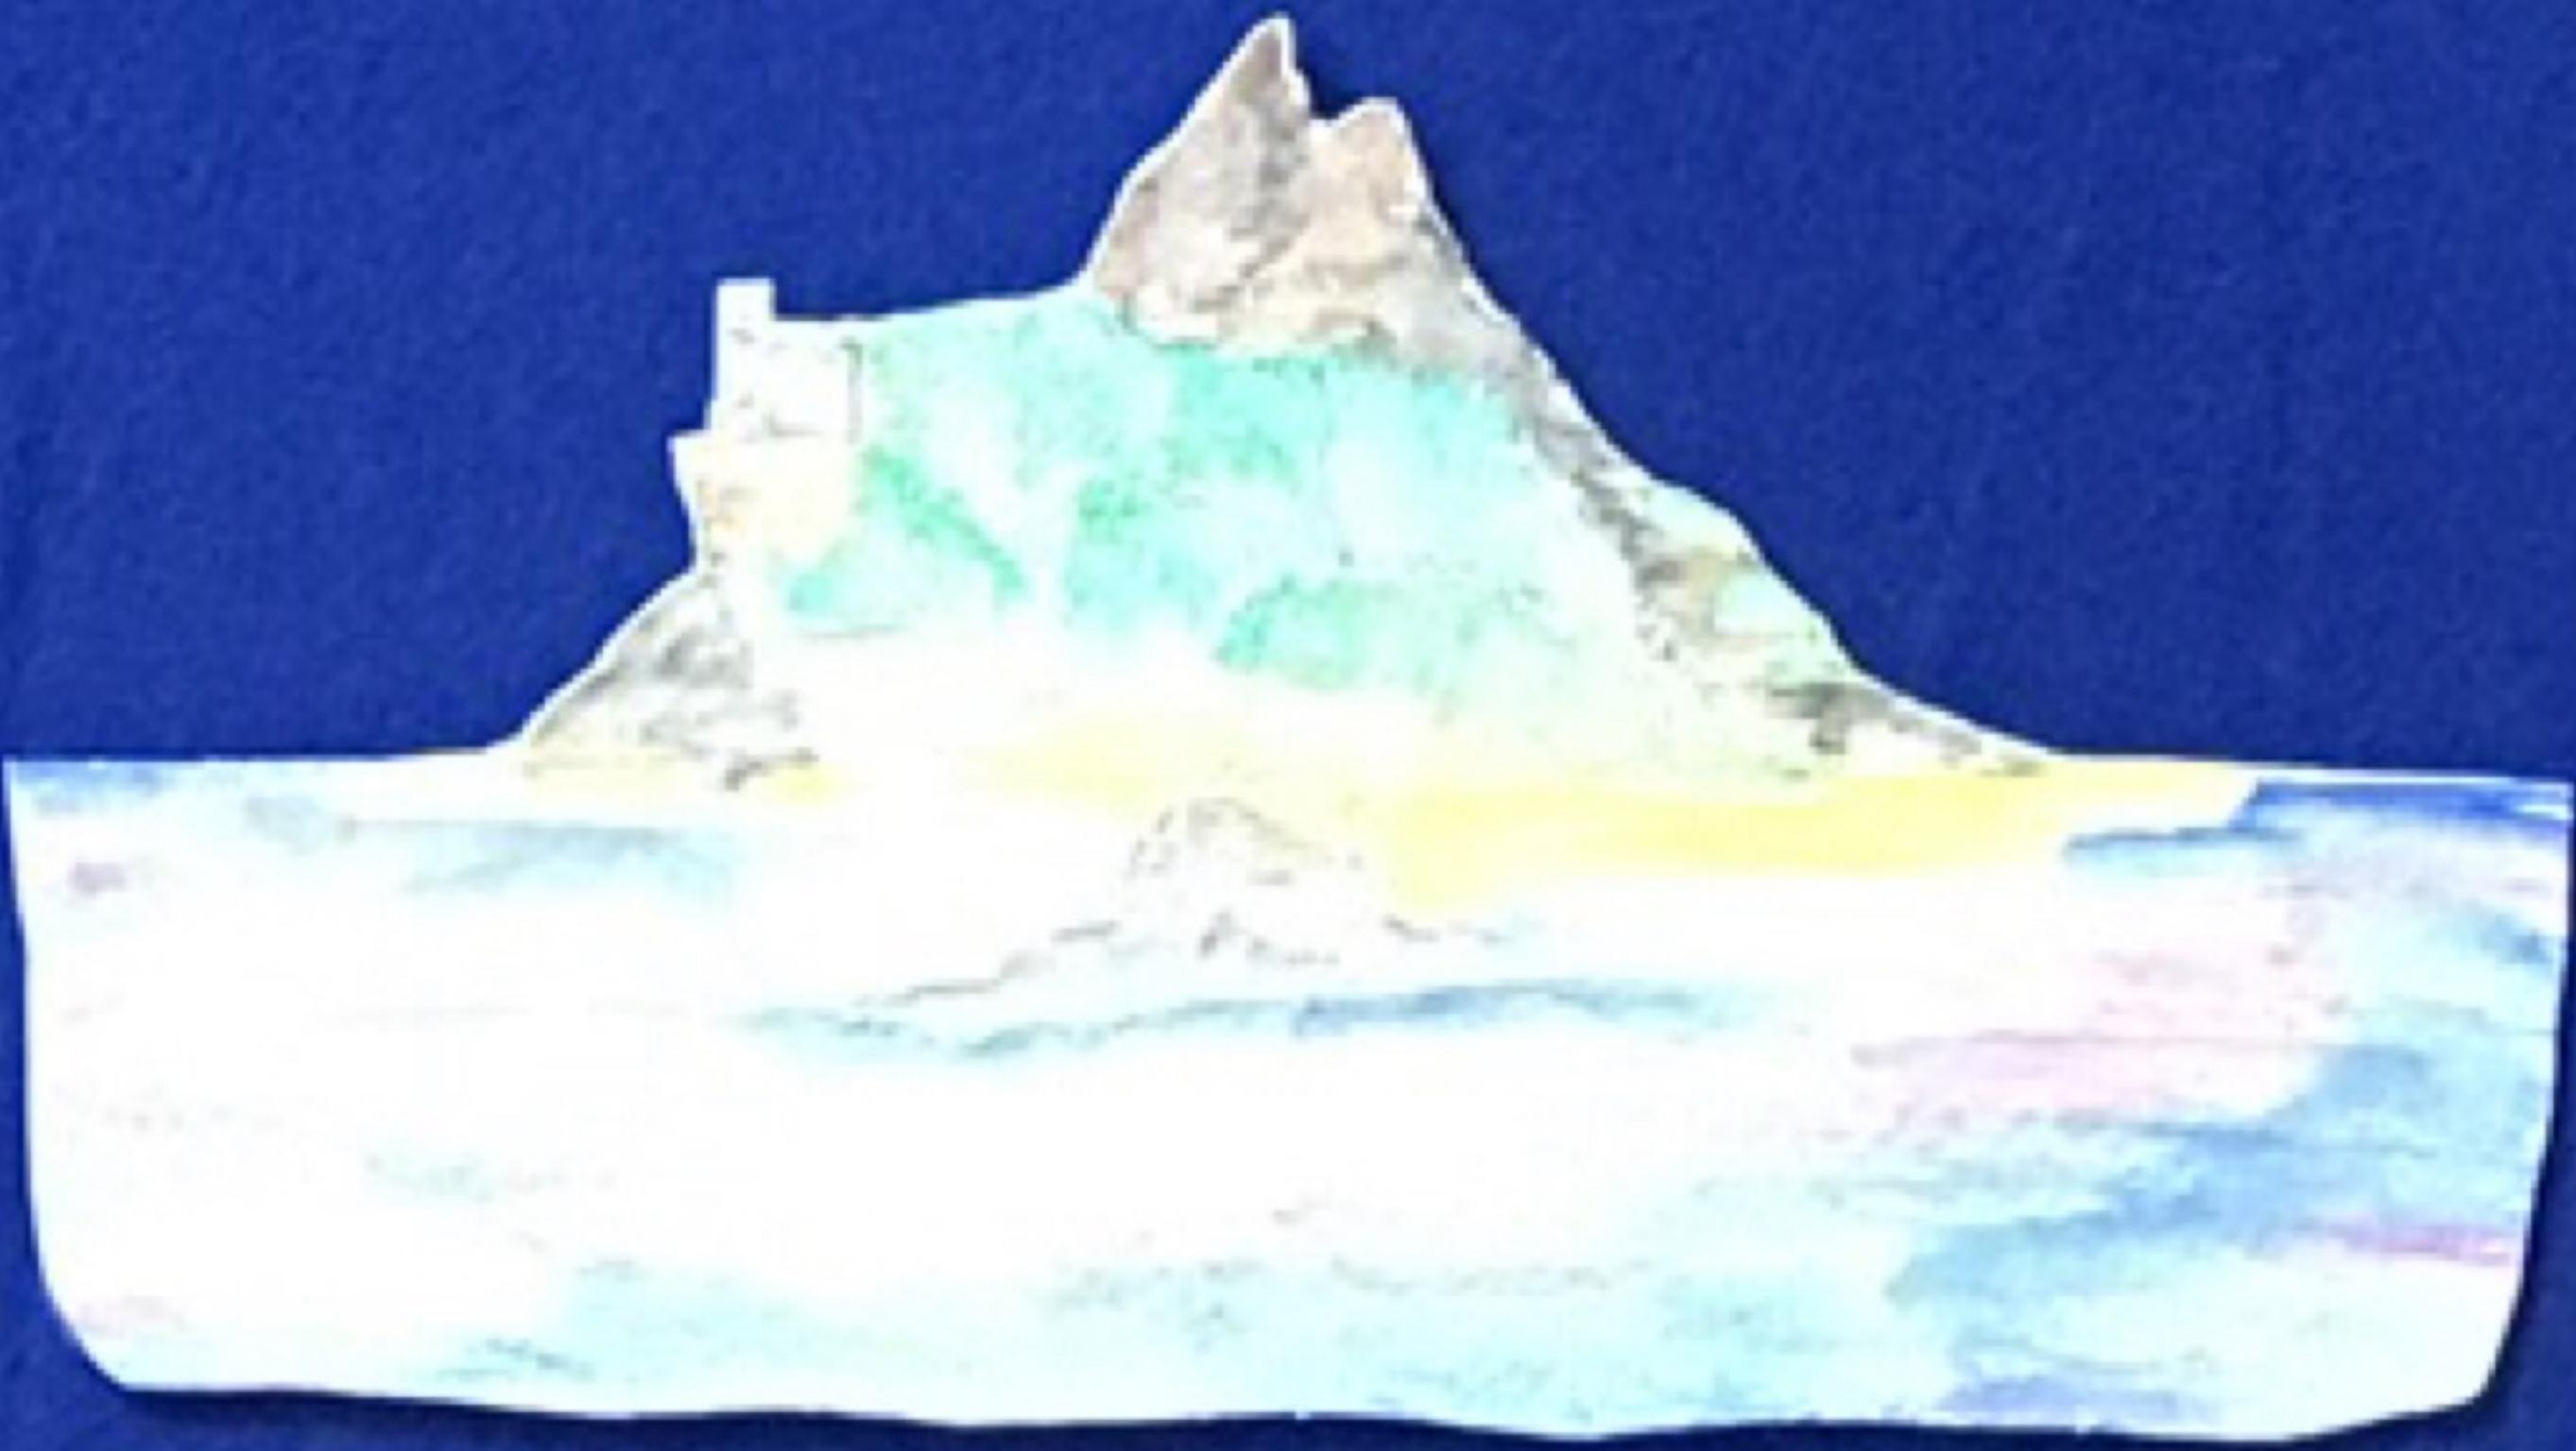

Coding Standards  
Coverage Metrics  
Configuration Hierarchies  
Internal Libraries

"Best" practices  
Bespoke build tools  
Security Controls

at one point.

Your Armor  
is someone else's Baggage

(some)

# Constraints

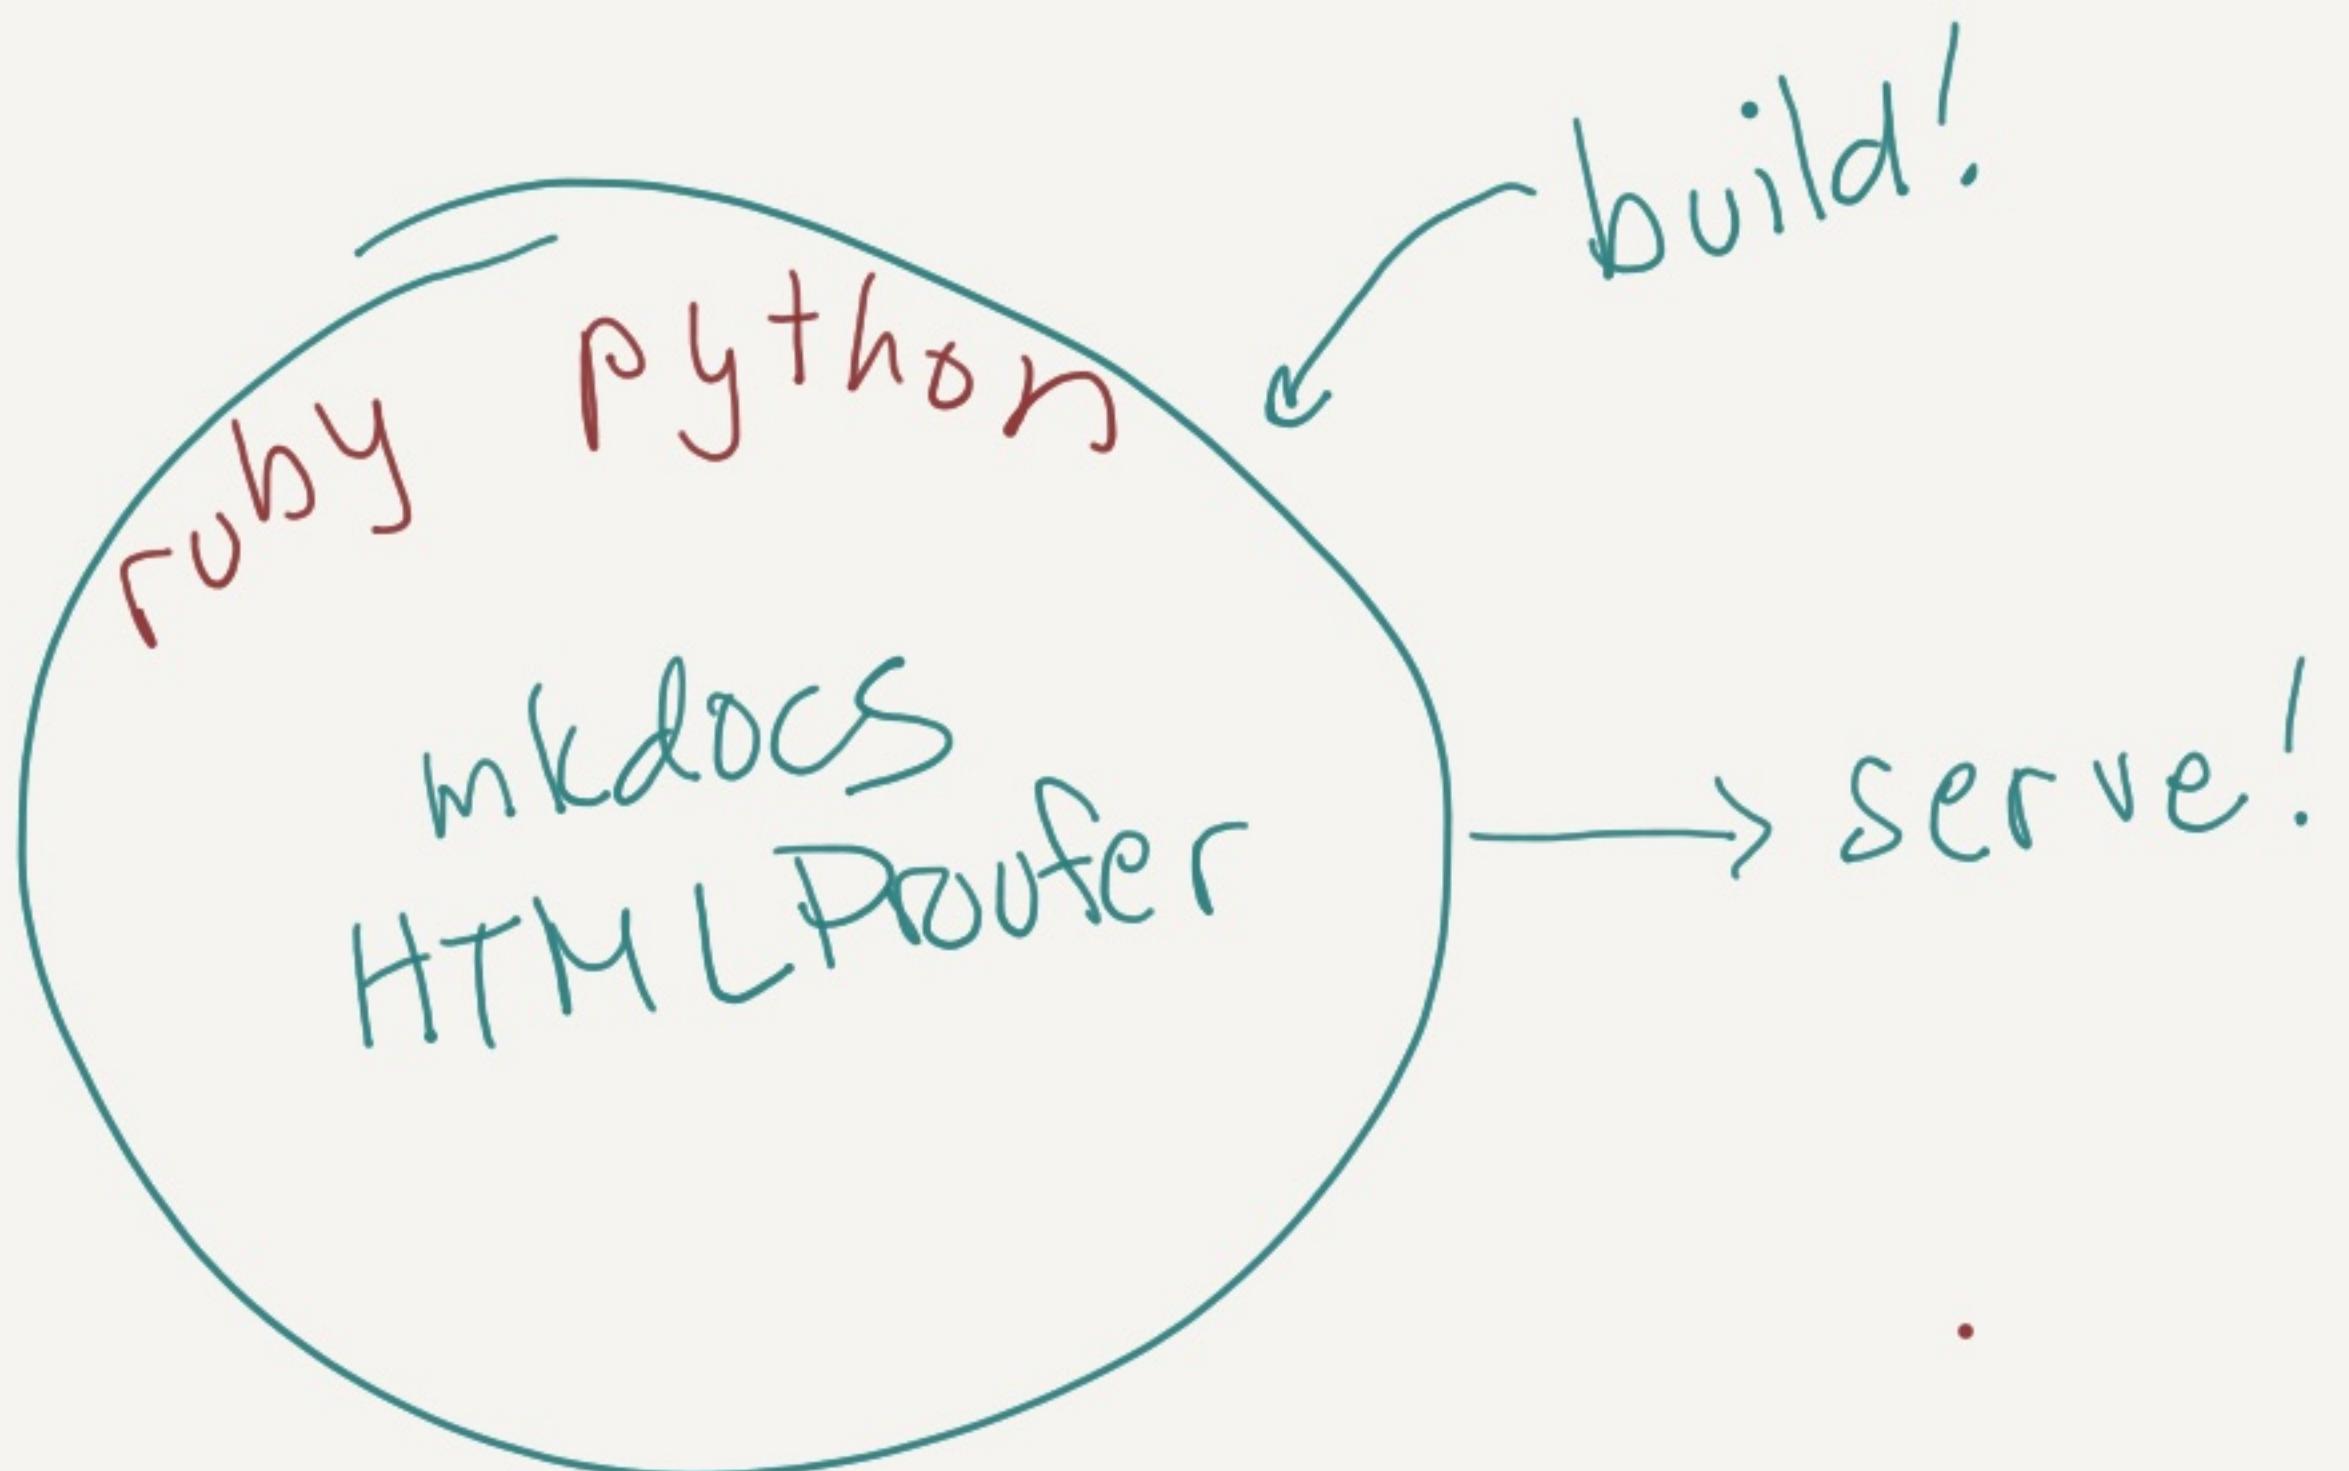

are

# Real

and success begets baggage.

how much baggage?

to automate:  
a protective shell.

it starts with...

README

Driven

Development
